

ABSTRACT

An airbag apparatus for a front passenger seat installed on the backside of an instrument panel and easily mountable on and detachable from an instrument panel. The airbag apparatus is arranged for easy installation in the instrument panel. The airbag apparatus for a front passenger seat is fed in below an instrument panel, and an upper piece is inserted into an opening by clamping a leg piece with the upper piece and a lower piece therebetween. Then, a container is pushed up at a predetermined height, so that the hook is brought into engagement with an opening. Next, bolts are screwed into nuts with openings therebetween, so that the instrument panel and the container are connected together.
